

# *Persigno-Financials*

Persigno Financials is a fully integrated ERP (Enterprise Resource Planning) solution offering complete financial and business management that can meet the needs of any size organization. This complete set of Business Applications allows your employees to make decisions based on timely analysis of timely data. This system was developed locally by Zeus Networks, Incorporated (ZNI).

Persigno Financials can fit any type of business or organization from manufacturing to distribution. ZNI can also customize the applications to fit your workflow. It utilizes the current and cutting edge computer technology to streamline operations, facilitate management, simplify logistics, accounting and inventory and expedite inter-personnel communication within the organization.

## OVERVIEW

Persigno Financials Enterprise Solution contains many major enterprise-level features that are necessary for running large complex organizations. The system is Multi-Company capable, and supports multiple divisions within each company, and multiple departments within each division, each with the ability to manage their own ledger.

Persigno Enterprise Solution also supports the use of multiple currencies, and allows any transaction to be entered in any currency. An exchange rate table can be managed in the system and can be kept updated with the latest exchange rate information.

Persigno Enterprise Solution also supports multiple warehouses, allows receipts into multiple warehouses, and tracks inventory by warehouse.

Persigno Enterprise Solution contains over 100 ready-made reports. Financial reports are GAAP compliant. Reports can be modified to fit customers needs.

## FEATURES

- ⇒ Easily scalable
- ⇒ Can run using multiple servers
- ⇒ Can be used for small to large-scale businesses
- ⇒ Support large geographical dispersed companies
- ⇒ Can run either client-server or web-based system

## MODULES

- ◆ Point-of-Sale / Order Entry Module
- ◆ Purchasing
- ◆ Quotations and Contracts
- ◆ Accounts Receivables (AR)
- ◆ Accounts Payables
- ◆ General Ledger
- ◆ Inventory Management
- ◆ Project Monitoring & Accounting
- ◆ GAAP-Compliant Reports
- ◆ Human Resource and Payroll
- ◆ E-Commerce
- ◆ Customer Relation Management (CRM)

## TECHNOLOGY AND ARCHITECTURE

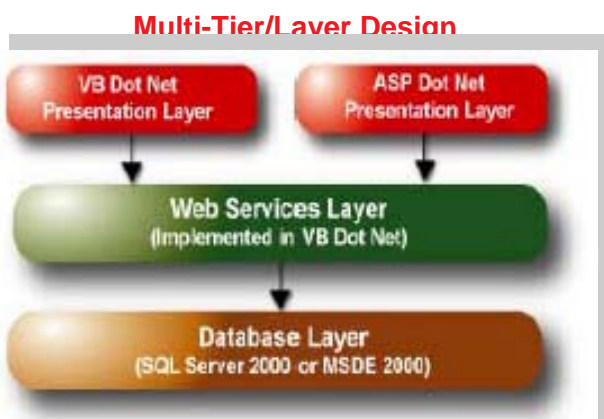

Implemented in ASP Dot Net and Visual Basic Dot Net, using Multi-Tiered design and taking advantage of today's latest most advanced database systems.

Persigno Financials Multi-Tiered design separates the Interface (Presentation Layer) from the Business Logic and the Database Layer, so the system can be easily adapted to different operating environments or scaled across multiple systems. The Multi-tiered design also allows different presentation layers to be used with the software without changing the business logic of the system.

Persigno Financials Enterprise is designed using Multi-Tier Dot Net Architecture, which means that all of the different program functions are separated into tiers, and each of these separate tiers of the system can be run on a different machine or on a group of different machines for performance and scalability.

The system also has multiple presentation layers implemented in different languages, and each communicating to the database engine through the business logic layer, which was implemented using Web Services. Implementing this tier as a web service allows the presentation layers to transparently interact with the back-end accounting engine either over a LAN, WAN, VPN, or the Internet.

Using tiers and web services also allows all of the presentation layers to interact with the accounting engine simultaneously, you can have multiple copies of the different presentation layers all interacting with the same accounting engine at the same time.

### All Multi's Covered

- **Multi-User**
- **Multi-Tiered/Layered Architecture**
- **Multi-Company**
- **Multi-Division**
- **Multi-Department**
- **Multi-Warehouse**
- **Multi-Branches/Franchise**
- **Multi-Currency**
- **Multi-Device**

## OTHER FUNCTIONS

### E-Commerce Functions

The PERSIGNO FINANCIALS Enterprise program automatically and dynamically generates a shopping cart from the information in its database.

### Real Time Shipping Rates

PERSIGNO FINANCIALS Enterprise program retrieves shipping rate information from both UPS and FedEx in real-time over the Internet.

### Security Functions and Audit Trail

The system comes features username/password access security with adjustable permissions. The system comes with a audit trail that tracks all changes made to all of the records in the system and stores those changes in the database.
